

Title:

#Criticism

Who:

Ethan Pinnick

Caleb Schroder

Ian Scheuermann

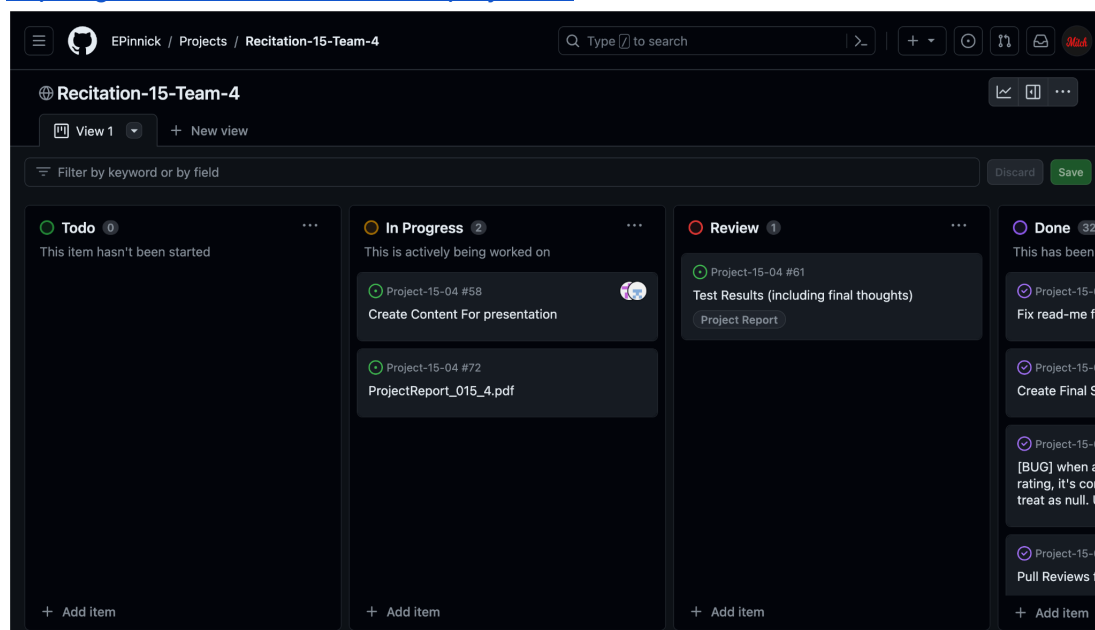

Mitch Siegel

Project Description:

The goal of this project is to create a functional movie review website. We incorporated 400 movies from [The Movie Database](#) with movie titles and posters, and real reviews also from The Movie Database to fill reviews on movies that have not yet been reviewed. Our site allows a user to create a secure account, login, and review any of the movies. There is a search feature to easily find the movie you are looking for, as well as a featured movie list highlighted at the top if you are looking for something new. Reviews include a rating out of 6.5 stars and optional text, which is all managed in the database.

During the course of the project, we utilized all of the programming skills and development platforms that were covered in CSCI3308. Our team operated under the Agile methodology and tracked our individual and group progress through the github project board and weekly meetings to meet deadlines and roll out all the features that our project showcases.

Weekly meeting logs and all project milestone deliverables are available in the MilestoneSubmissions directory of the git repository.

Contributions:

- **Caleb:** Handled the scribe duties for all team meetings and took notes from our meeting with TA. Created wireframe and base design for the website. Worked on navbar, login, and register pages. Made a logo for the website and helped with other UI design choices.
- **Ian:** Created the original project idea. Implemented submission functionality. Generated initial review database content. Setup and managed hosting for the site.
- **Mitch:** Handled design of UI & UX. Was in charge of making sure everything was working with each other. Created database structure. Handled importing of reviews from the movie database.
- **Ethan:** Worked with Mitch to create the UI layout for the movies home page and view details page. Tested for bugs and functionality. Created/setup team Github Repository. Created Use Case and Architecture Diagrams, and the live video demo.

Test Results:

Our testing was very successful. We ended up following our testing plan without any issues, thanks to the initial work we put into it. However, we wished our testing plan covered more routes, and more tests. The tests we had were very solid, but didn't totally cover the scope at which we wanted to test. Next time, we know to write more test for most of the routes.
